

Direct API Flow

1. [Onboard as Tech Provider](#)
2. Create a [partner solution](#) with AiSensy (Solution Provider)
3. Tech Provider / Tech Partner must share the following details with AiSensy (Solution Provider) after completing the above 2 steps:
 - [APP ID](#)
 - [APP Secret](#)
 - [Solution ID](#)
 - [Business Manager ID](#)
4. Direct API partners can build their [own embedded sign-up](#) page.
5. If Direct API partners dont wish to build their own embedded signup page then they can use AiSensy's link-generated embedded signup page for which they must share their [System Use r Token](#) with AiSensy and add <https://waba.api-wa.co> in your [whitelisted](#) domain.

Custom Embedded Signup Pre-requisites:

1. Extract the code of the user in authResponse received in response from FB JS SDK Login
2. Using the above code and make a get call to the below endpoint to extract the accessToken of the user.

Note: This step is not required if you are using the [Legacy Embedded Signup](#) since the accessToken is available in the authResponse of FB JS SDK login itself.

GET https://graph.facebook.com/v17.0/oauth/access_token?client_id={APP_ID}&client_secret={APP_SECRET}&code={CODE}

3. Using the above accessToken and make a get call to the below endpoint

GET https://graph.facebook.com/v15.0/debug_token?input_token={ACCESS_TOKEN}&access_token={YOUR_SYSTEM_TOKEN}

You will get a response in the below format:

```
{
  "data": {
    "app_id": "1199369954601511",
```

```

    "type": "USER",
    "application": "AiSensy",
    "data_access_expires_at": 1709033891,
    "expires_at": 1701262800,
    "is_valid": true,
    "scopes": [
      "email",
      "catalog_management",
      "ads_management",
      "ads_read",
      "business_management",
      "whatsapp_business_management",
      "public_profile"
    ],
    "granular_scopes": [
      {
        "scope": "ads_management"
      },
      {
        "scope": "ads_read"
      },
      {
        "scope": "business_management",
        "target_ids": [
          "2525190820796022"
        ]
      },
      {
        "scope": "whatsapp_business_management",
        "target_ids": [
          "104340303743838"
        ]
      }
    ],
    "user_id": "1098700794896205"
  }
}

```

Extract wabaAppId (WhatsApp Business Account ID) which is the **first element** of the `target_ids` array where "**scope**" is `whatsapp_business_management` in **granular_scopes** object as in the above illustrated response.

4. To Complete the embedded signup flow & to establish the credit line, hit the endpoint mentioned in the below doc:

<https://aisensy.stoplight.io/docs/partner-api/89nfh76wnjomn-submit-waba-app-id>

FAQs:

1. In my embedded signup Facebook popup shows the following error:

Feature Unavailable

Facebook Login is currently unavailable for this app as we are updating additional details for this app. Please try again later.

Solution:

- a. Go to your [Apps](#) in the meta developer console.
- b. Select your App
- c. From the left pane, find the products section
- d. In products section go to Facebook Login for Business  settings, you will find a banner like the one listed below.

Your app has standard access to public_profile. To use Facebook Login for Business, switch public_profile to advanced access. [Get Advanced Access](#).

- a. Click on Get advanced access, find public_profile, and then click on Request advanced access
